Fluent Forms Integration

Integrations · https://www.ninjatables.com/docs/fluent-forms-integration/

Fluent Forms is an amazing dynamic form plugin with 25+ form input fields, multiple integrations, conversational forms, conditional logic, and more.

Ninja Tables and Fluent Forms integration lets you display all form entries in a table format on the front end.

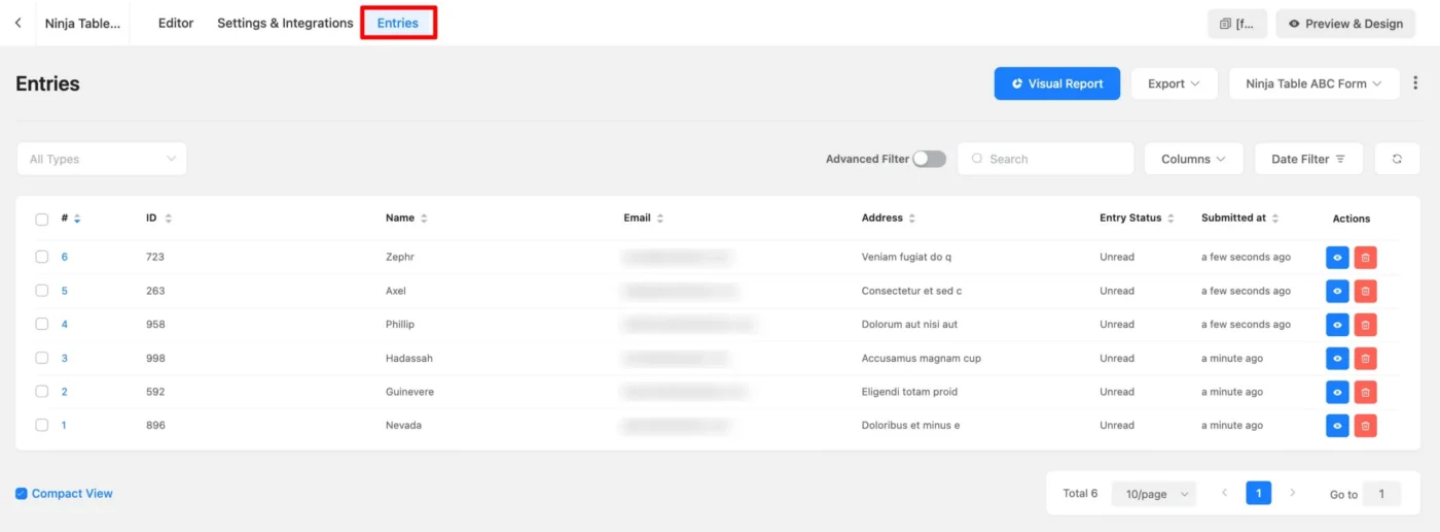

Here's a video on how this integration works.

Both the **Ninja Tables** and **Fluent Forms** are installed beforehand in the dashboard we're using.

Create a Form and Display Form in a Table

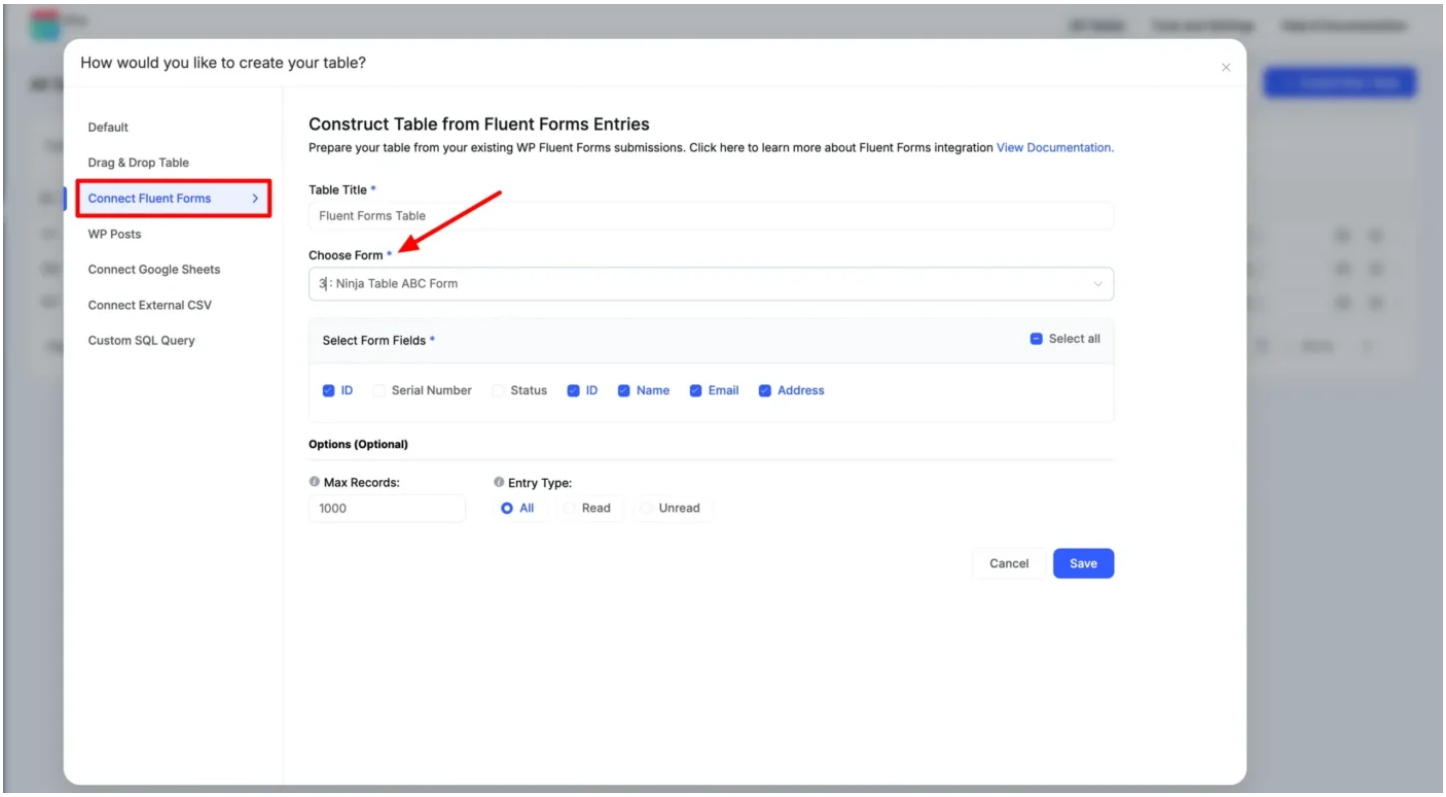

Go to the Fluent Forms dashboard, create a form (here's a form named **Contact Form**) & put some entries into it.

Form Entries

- The above image shows that all the required data has been entered into the form.

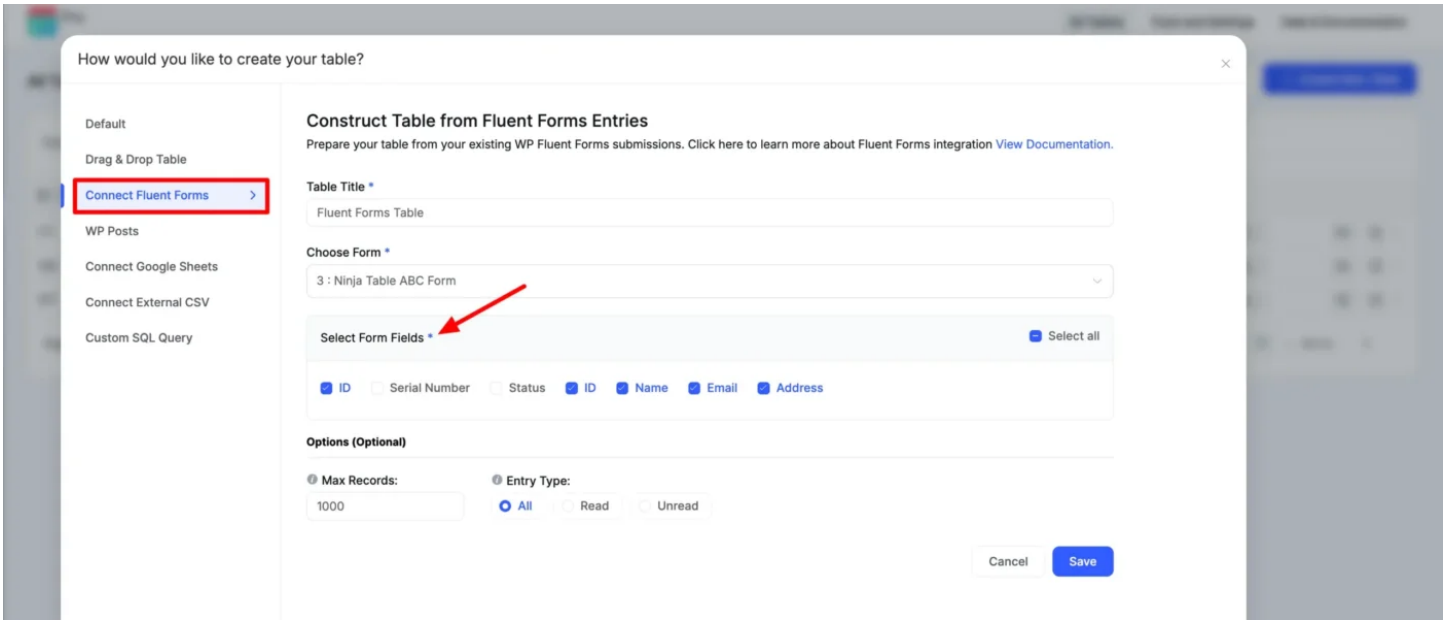

- To show these entries in customized and designed Ninja Tables, simply connect your table to Fluent Forms.
- Click **Connect Fluent Forms** from there, and give a title to your table. Then choose your preferred form using the box "**Select a Form**" like the below screenshot.

Connect Fluent Forms

- After connecting your form, all fields of your selected form will now show up.

  From here, you can choose and save all fields or any unique field you wish to view in the table.

Select Entry Fields

- When you're done selecting or deselecting the form fields, hit the "Save" button.

  Now a new table will be created with the form fields as table header and form entries as table data.

- Edit the table’s name, data type & table style as well using Ninja Tables. Plus, Ninja tables also give you the option to customize table design, responsiveness, and table color.
- Further customization can be done if you click "You may edit your table settings here." You can add other columns or deselect the one you added.

Use responsive breakpoints or stackable table features in this form data table if you need a cleaner look.

Here's a Fluent Form data table.

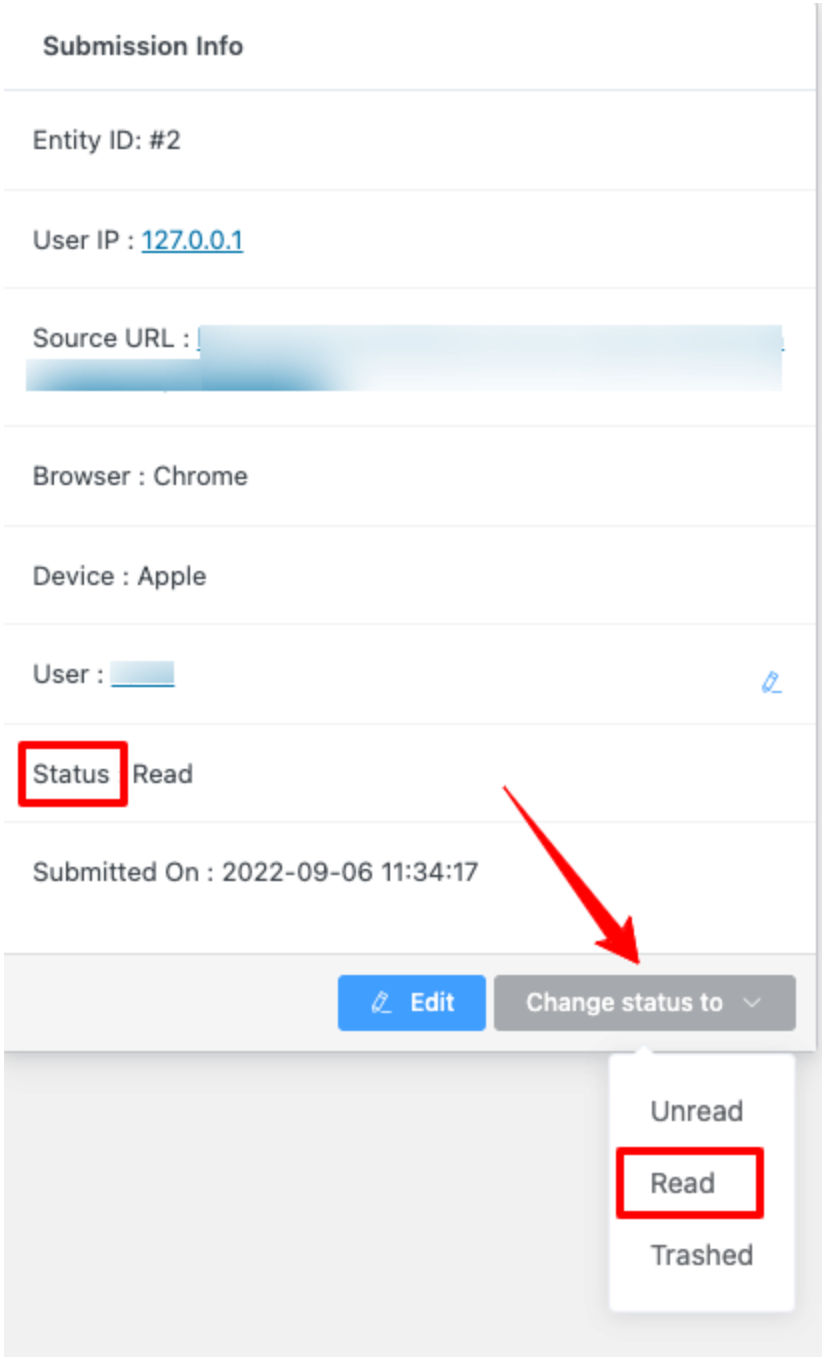

Name	Email Address	Current weight *kg	Membership Period
Et sed	lyqudemivu@mailinator.com	49	3 Months
Amet nihil debitis	typa@mailinator.com	80	6 Months
Incididunt minima qu	cocevyp@mailinator.com	90	1 Year
Ut odit vitae aliqui	bidodel@mailinator.com	98	1 Year
Incididunt quae arch	libicunoba@mailinator.com	77	6 Months
Repellendus Omnis e	jibybe@mailinator.com	59	6 Months

Show Your Table Data According to the Entry Type

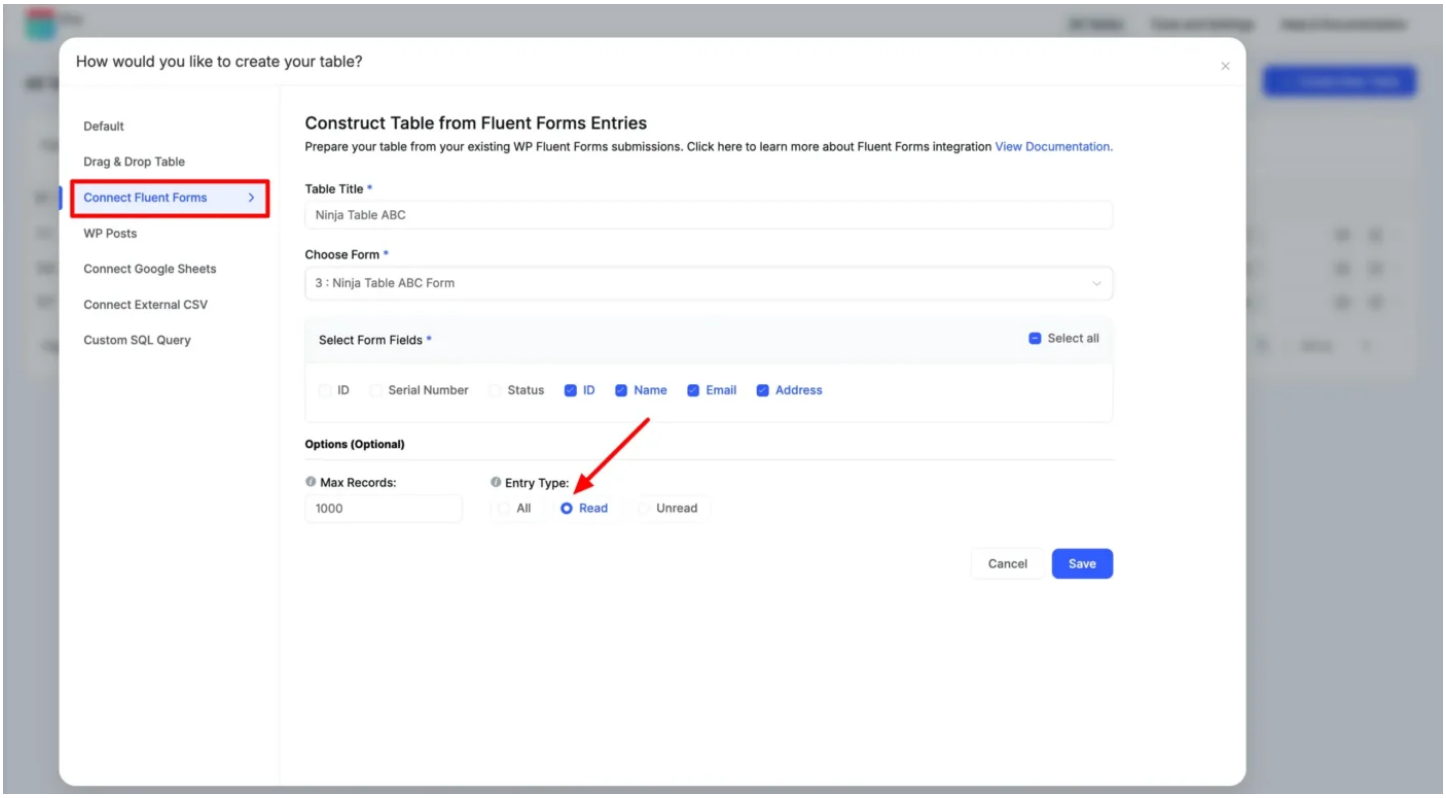

You can also show table data based on the Entry type.

Go to the form where all the required data has been entered.

- Click the **Change Status** field and select your entry type Read / Unread / Trashed.

- Now go to your Ninja Table, which is connected with Fluent Forms. **Entry Type** enables you to select what type of entries you want to show from fluent forms.
- Choose your Entry type as per your needs.

Entry Type

The combination of Fluent Forms and Ninja Tables is the most powerful one! And undoubtedly, it is very helpful for your website.

Craft Responsive Data Tables Fast!

Ninja Tables is the best table plugin to show data in an organized table format.

Get Ninja Tables
