How to Create Chart Manually in Ninja Charts

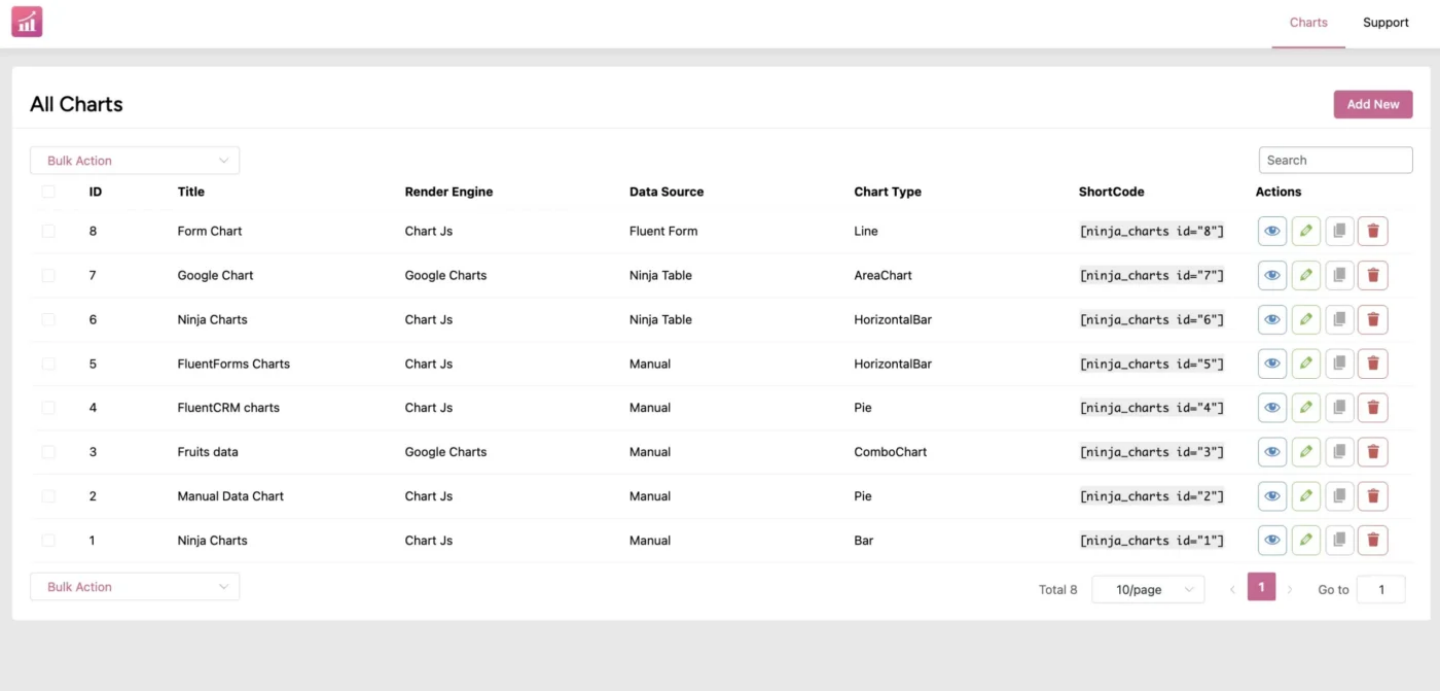

Ninja Charts · https://www.ninjatables.com/docs/how-to-create-chart-manually-in-ninja-charts/

Want dynamic data charts on your website? Ninja Charts is here for you!

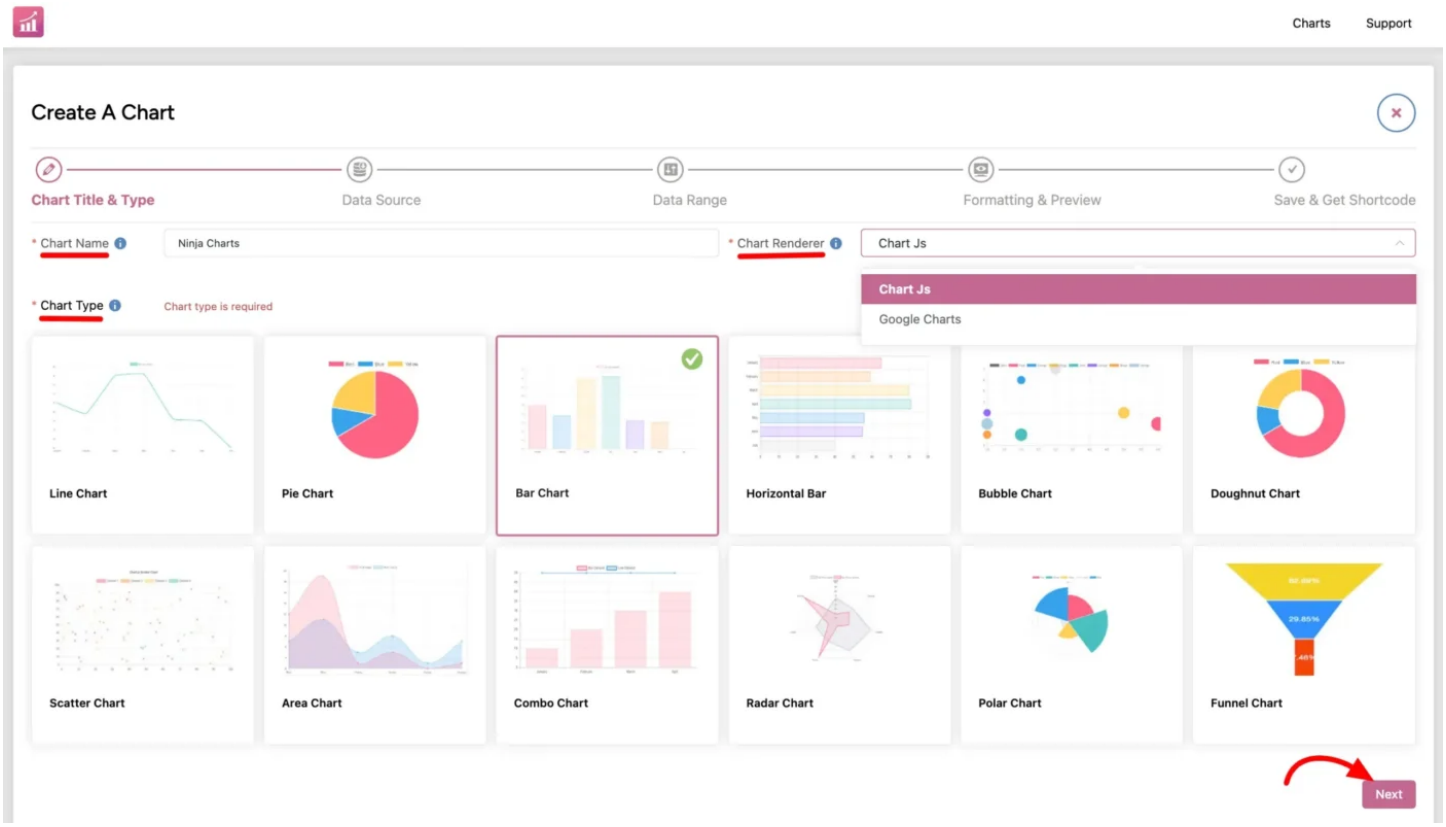

This free chart generator in WordPress lets you create and customize all sorts of charts easily. For example, pie charts, line charts, bubble charts, histograms, etc.

Create a Chart with Manual Data Input

- To create a Manual Chart, click on the **Add New** button from the Ninja Charts dashboard.

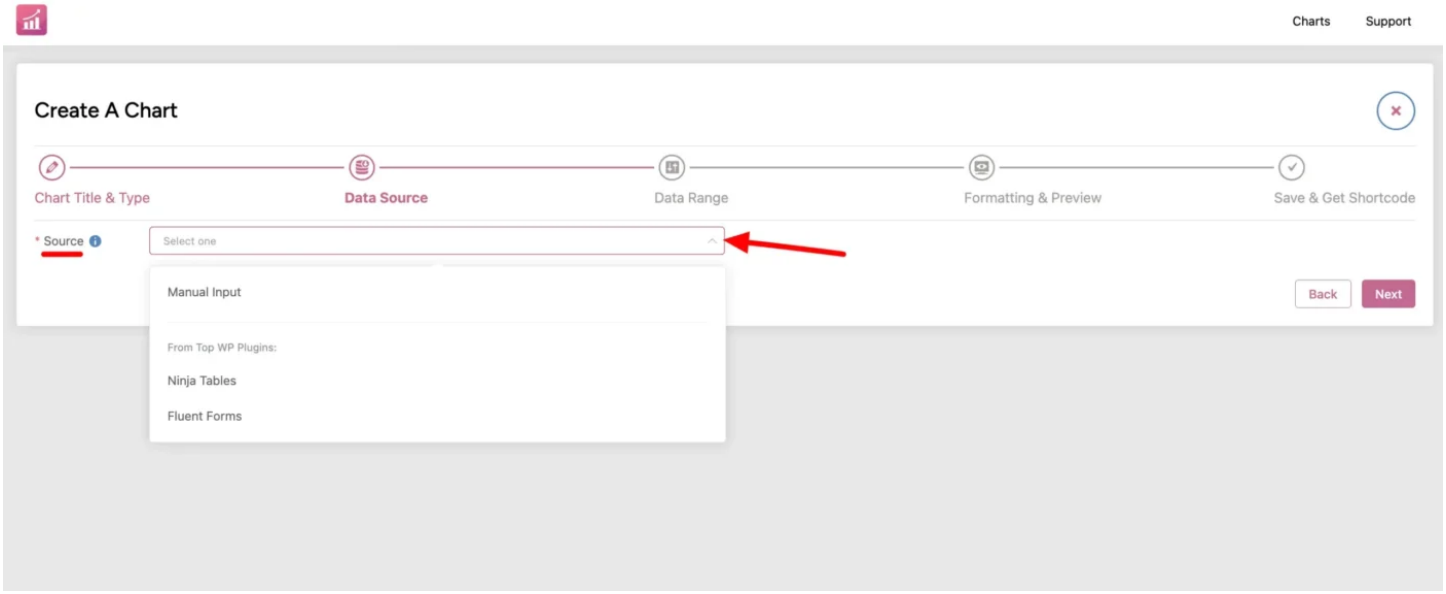

- Then enter your Chart Name and choose your Chart Renderer. Two types of chart renderers are available: Google Charts & Chart Js.

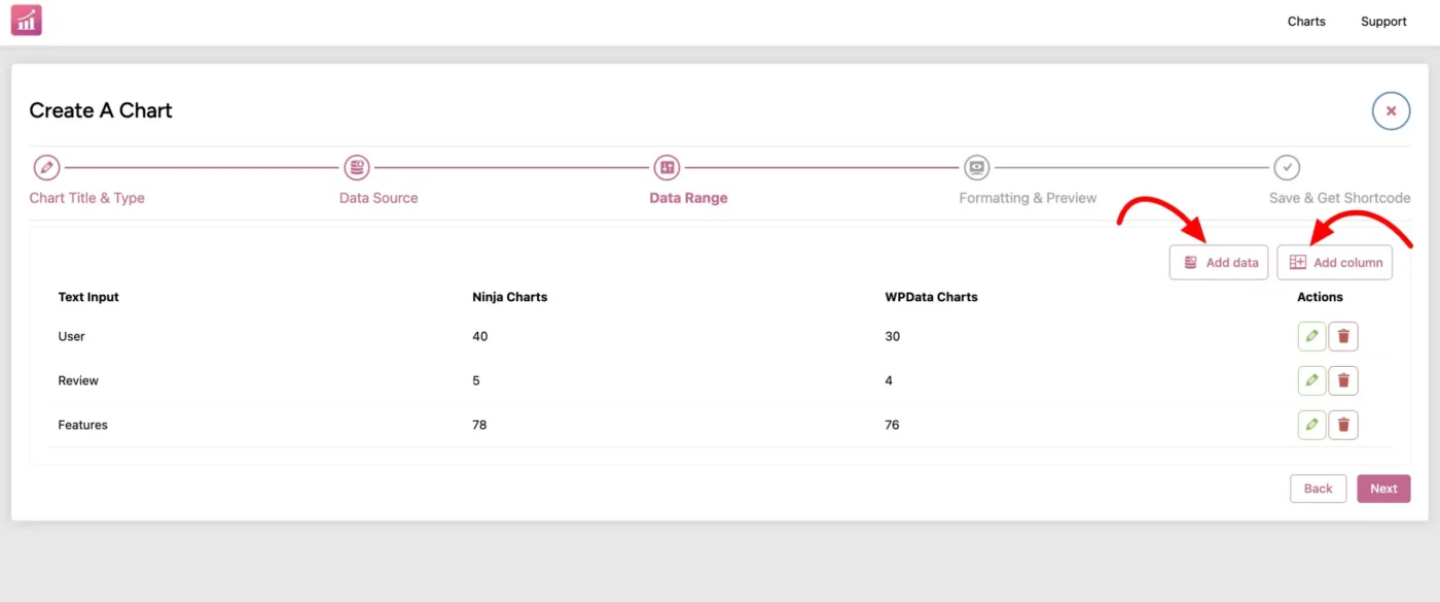

- Now choose your preferred chart type. You can pick any chart type from the 10+ options.

- In the **Data Source** tab, select **Manual Input**. Select and move to the next tab.

- In this **Data Range** option, hit the **Add Column** button first to input the data column to the chart. Then **Add Data**. You can add as many data as you want.

Text Input

This input text can generate the chart label.

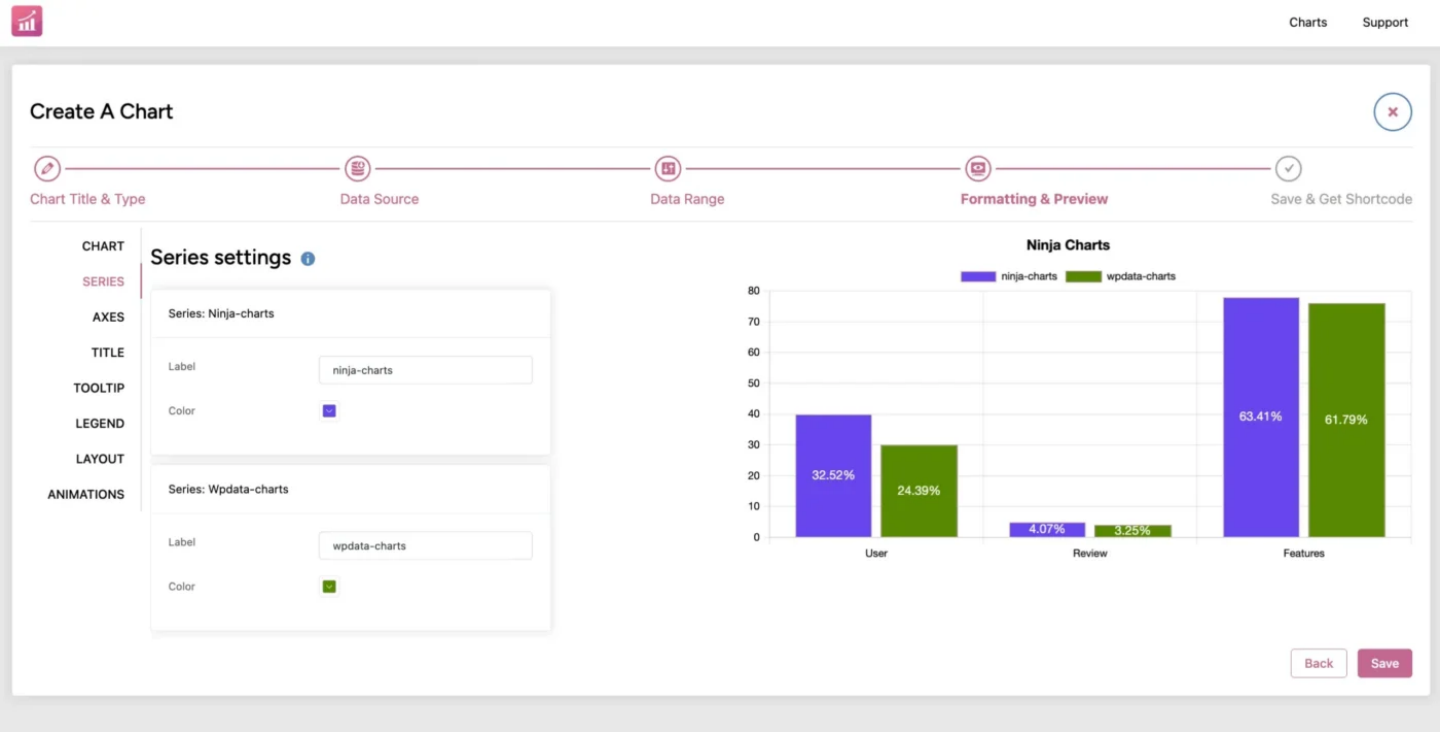

Number Input

The number input can generate chart data.

Don’t forget to click the Next button. Now you’ll be moved to the **Formatting & Preview** tab where you can customize the chart in real-time.

Manually Created Chart

Once you hit Next and move to the **Formatting & Preview** tab, you'll see the Bar Chart is ready with the data you put manually.

Now, it's done. Customize the chart from here all you want. Then hit **Save** and copy the auto-generated shortcode to use on your website.

This is how you can easily create Manual Charts using Ninja Charts.
