Image Element (Pro)

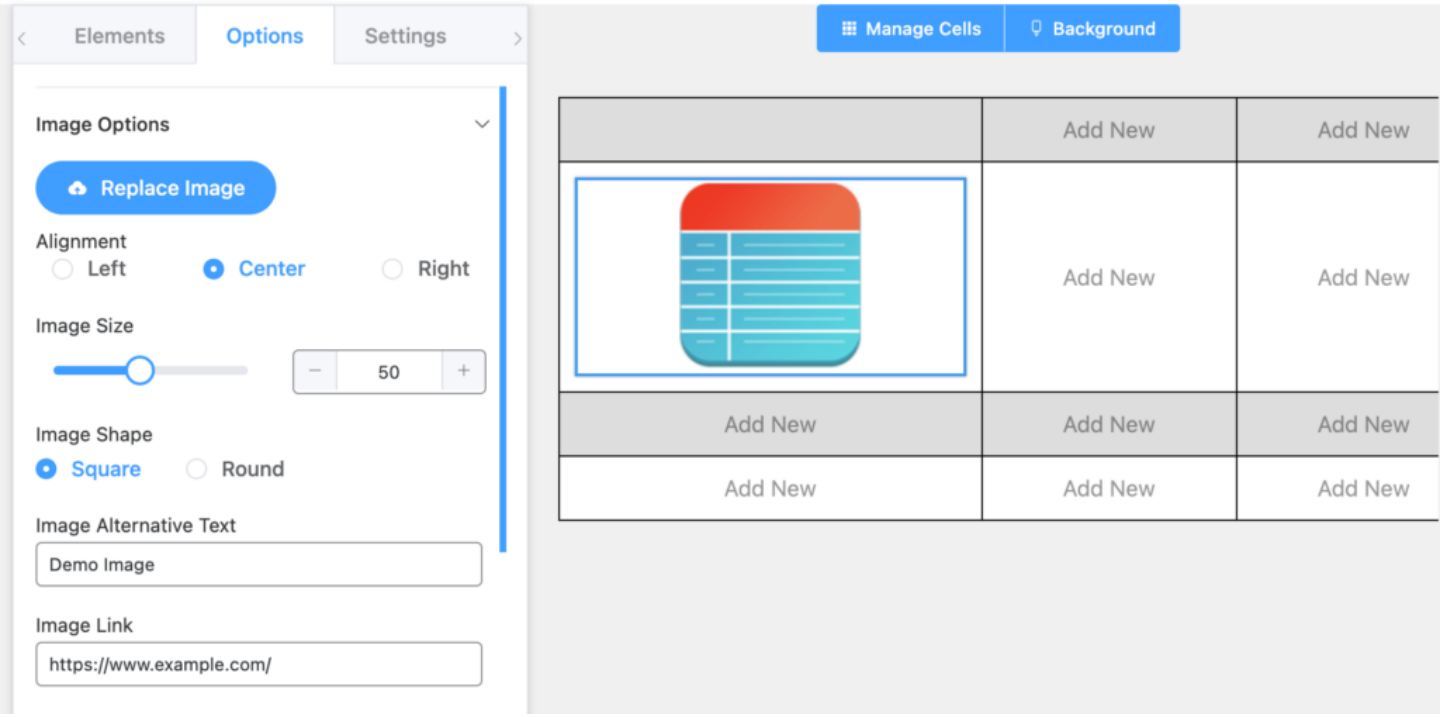

Table Elements · https://ninjatables.com/docs/image-element/

Sometimes texts and numbers are not enough to express the information we want to present to users. We absorb information better with visual items like images.

Ninja Tables Drag and Drop has an image element for you to add media to the table.

Just drag the element to insert image in table.

Let’s add the image element in the drag and drop mode to show you how it works.

When you drag the element on the table, it will show a default image. Change it to whatever you want.

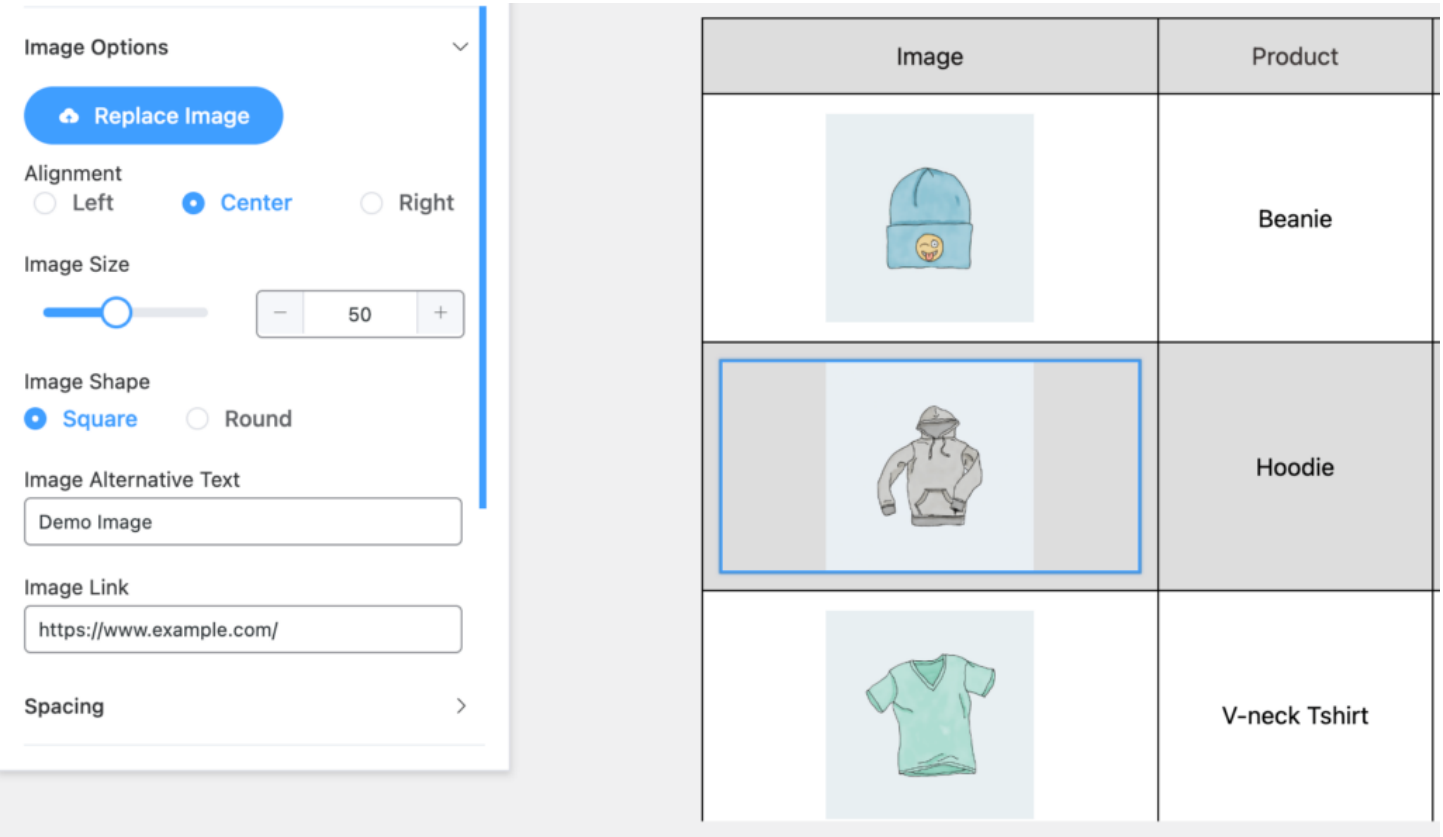

Properties of Image Element

Option Name	Type

Replace Image	Media Upload
Alignment	Left, Center, or Right
Image Size	Numeric Value
Image Shape	Square or Round
Image Alternative Text	Text Edit
Image Link	Text Edit for URL

1. **Replace Image:** Replace the default image with your own image with the Media Upload button from your computer.
2. **Alignment:** Align the Image to either Left, Center, or Right. By default, it is set to Center.
3. **Image Size:** Change the size of the Image. By default, it is set to 50.
4. **Image Shape:** Change the shape of the Image to either square or round. By default, it is set to Square.
5. **Image Alternative Text:** The alt text of the HTML <a> tag or simply the Alternative text of the link of the image.
6. **Image Link:** The URL of the link of the image which you can edit within the provided field.

Here's how a table looks with images:

Conclusion

If you run an online product store, you need a table with product images. This is where Ninja Tables' "Image Element" comes in handy for you.

Insert images in WordPress tables easily.
