Import Ninja Tables JSON

Import / Export · https://www.ninjatables.com/docs/import-ninja-tables-json/

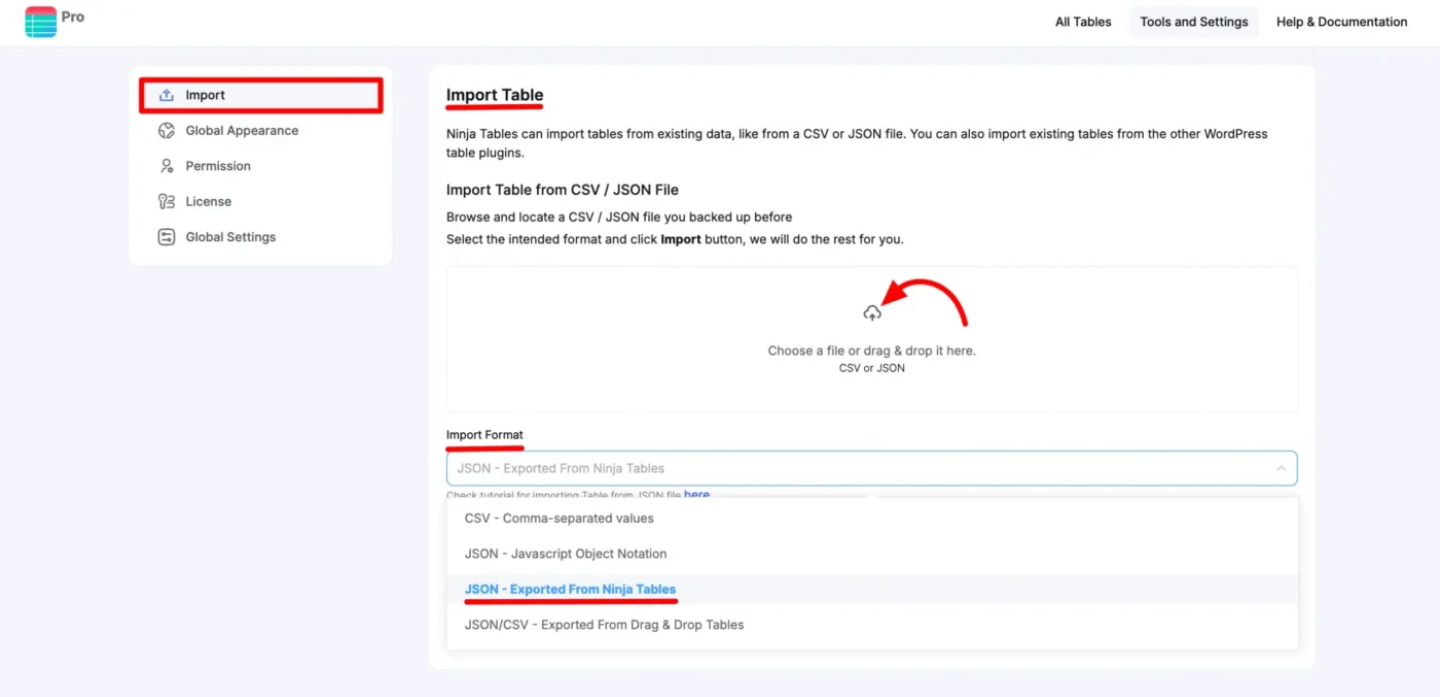

Ninja Tables can import JSON file from an existing table of the plugin into another table.

Importing **JSON** to your table using Ninja Tables is a simple and quick process. This plugin is intended to make things easier for users and to improve the overall user experience.

Import JSON File

Let’s dive into the simple guide to learn how to **import JSON** file.

- First, navigate to the **Ninja Tables dashboard** and click on the **Import Table** button on the top right of the screen.
- To know how to **Export Data (CSV/JSON)**, you can get help from here.
- Now, go to the **Import** button (on the left), and you will get an **Import Format** field, where you can choose your desired **JSON (Exported From Ninja Tables)** table format.

Import Format

- Upload your **Exported JSON** file (from Ninja Tables) in the **Select File** area by clicking on the **Choose File** button and then set the **Import Format** as a **JSON (Exported From Ninja Table)**.
- You can also upload your **Exported JSON/CSV** file (from Drag & Drop Tables) in the Select File area by clicking on the Choose File button and then setting the **Import Format** as a **JSON (Exported From Ninja Table)**.
- Lastly, click on the **Import** button when you are done!

Exporting the JSON file lets you export the Table Styling with the table data.

This is how easy it is to import JSON file in Ninja Tables.
