Import Table Data from CSV

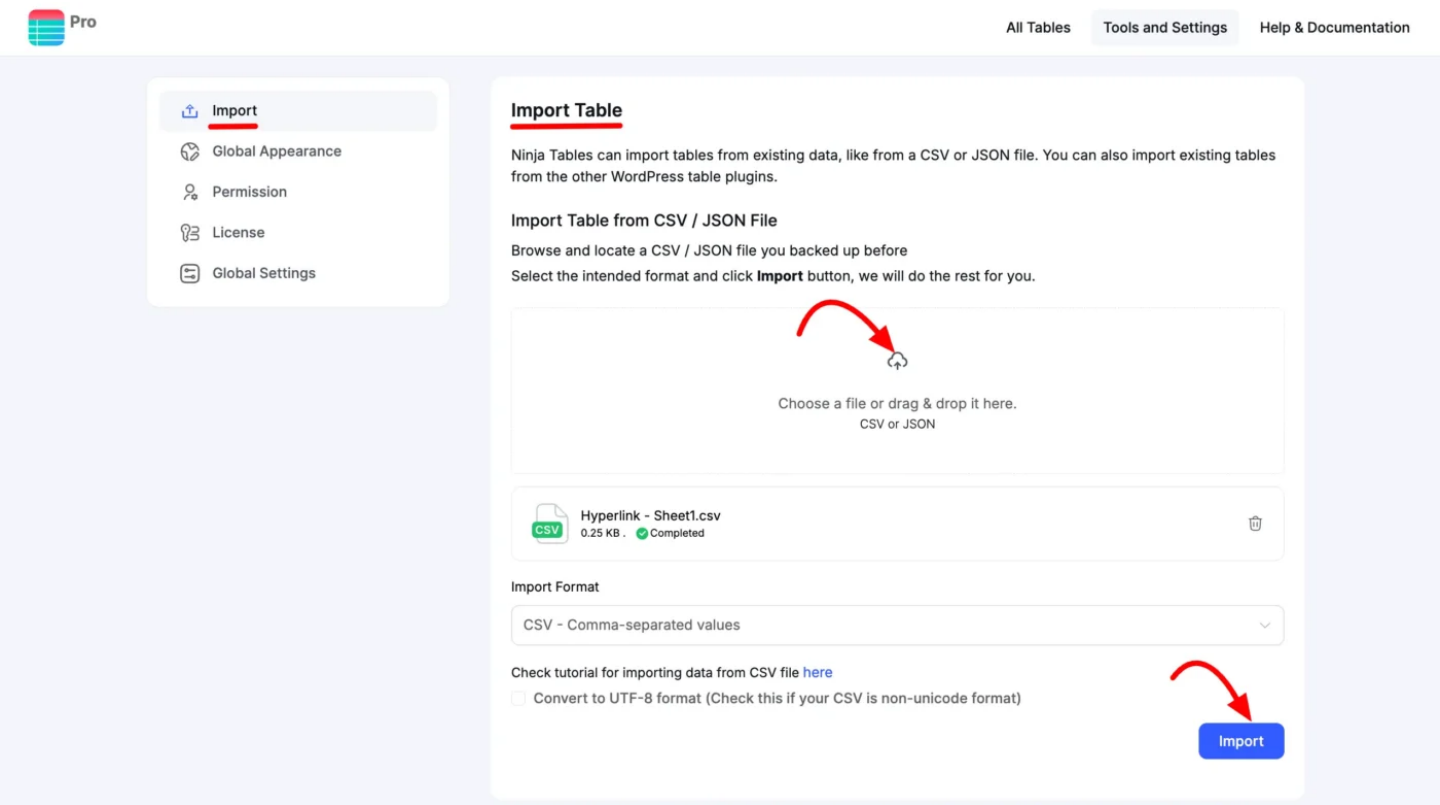

Import / Export · https://www.ninjatables.com/docs/import-table-data-from-a-csv/

If you have an existing table on another website, turn the table data into CSV file (or **JSON**) and import it into Ninja Tables.

- First, go to the Ninja Tables dashboard and click the **Import Table** button (or the "Import" option on the left menubar). Now, press the **Choose File** button.

- Choose the **CSV / JSON** file you want to upload.

- Click the **Import** button, and then you're good to go!

Ninja Tables is going to do the rest for you. Your data will be automatically uploaded.

You can also use the "Import-Export" tab at the top of a table to import tables.

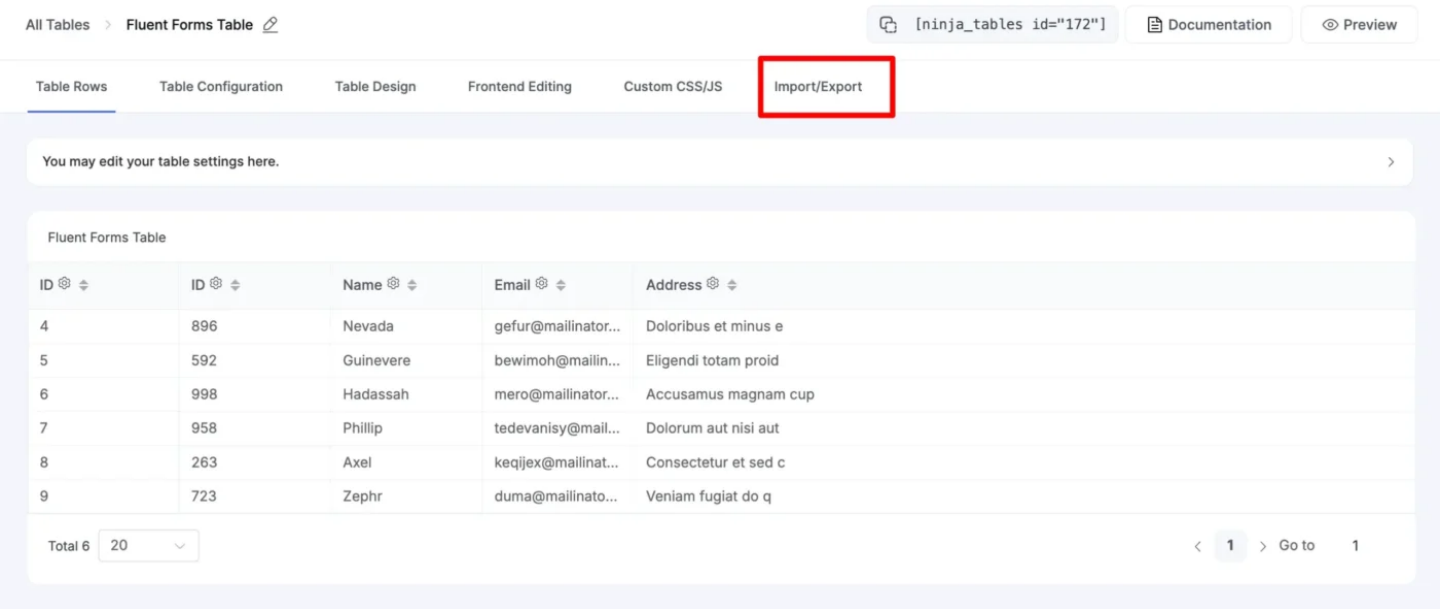

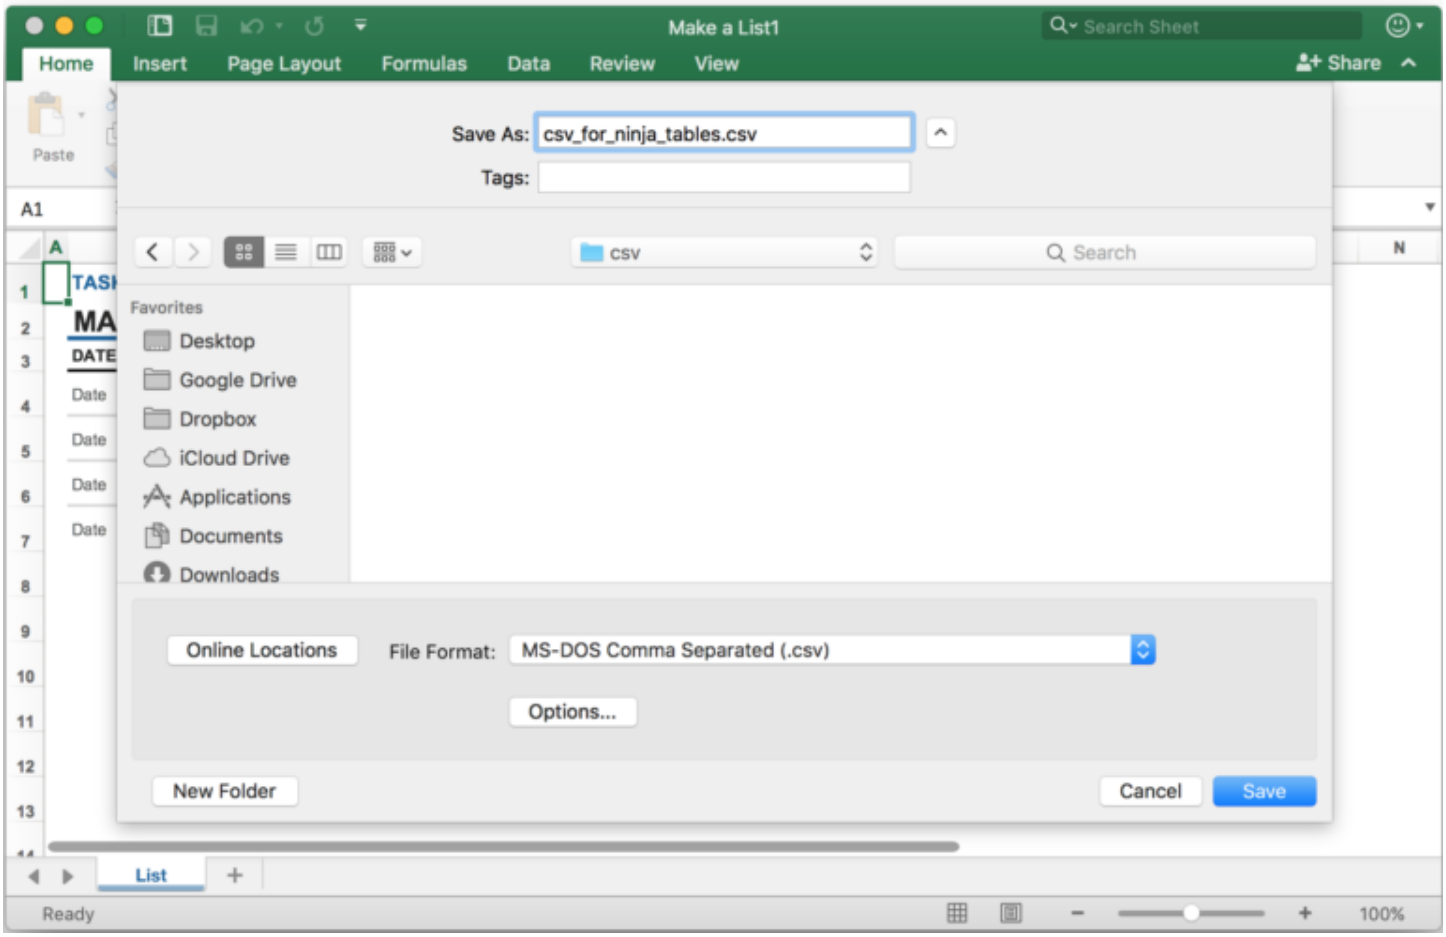

Table Data Import for MS-Excel

If you have any issue with CSV data imports, such as having blank values in your cell, in case you use MS-Excel, export the CSV as MS-DOS Comma Separated Value (CSV).

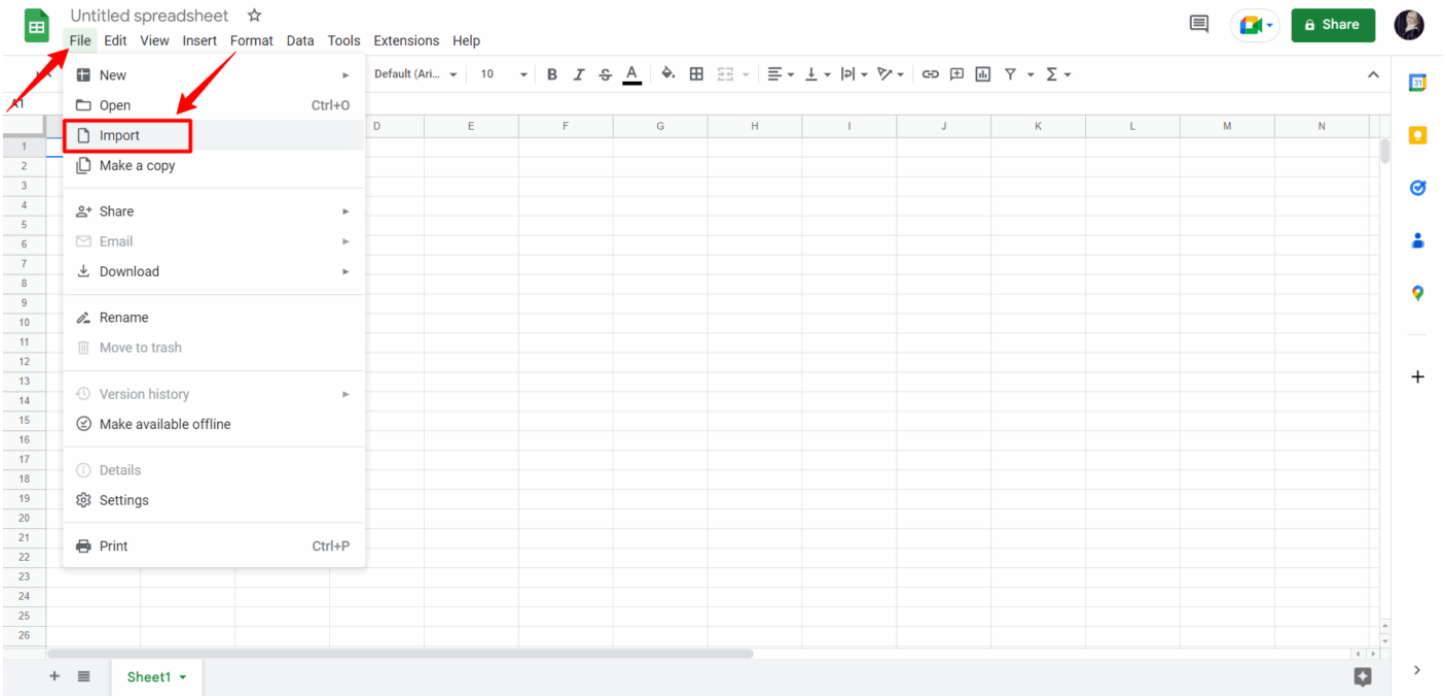

Export As MS-DOS comma-separated (.csv) format

Ninja table supports only comma-separated CSV and JSON.

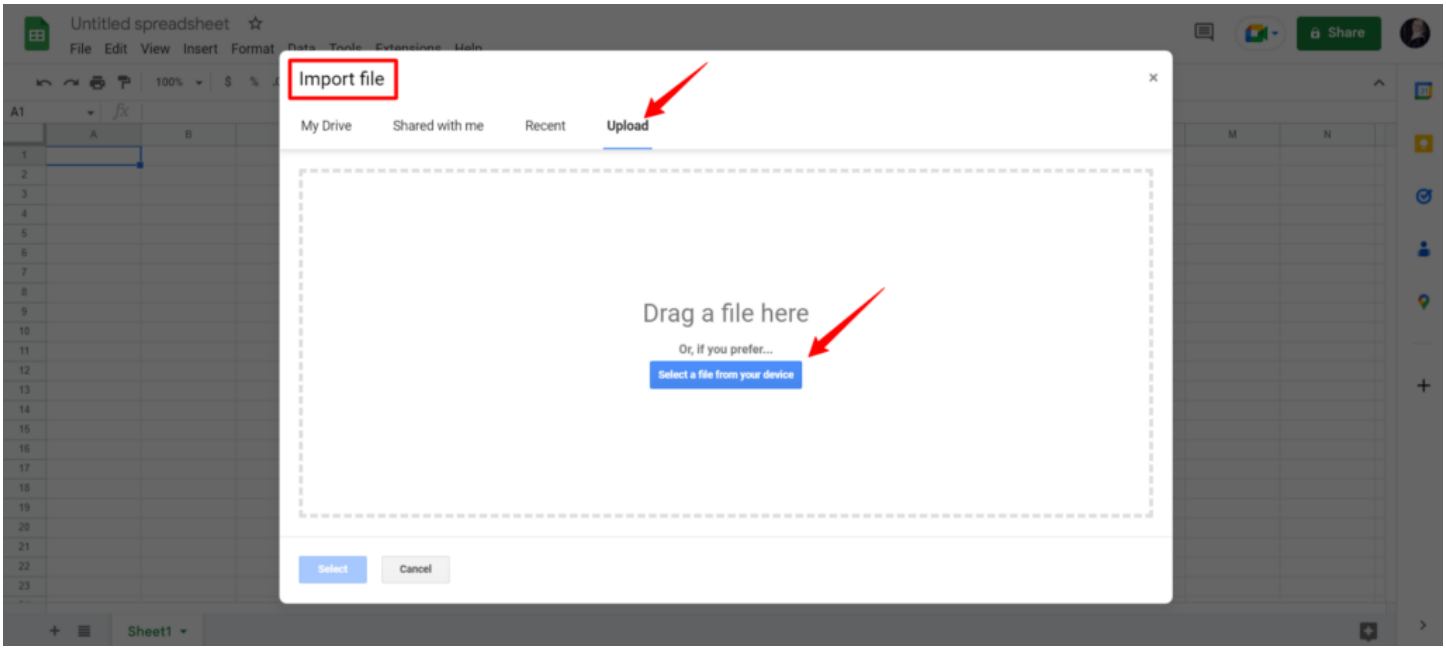

If your CSV file is not **Comma Separated** & is in another format, there is a trick for converting it to make it Comma-Separated-CSV,

- First, go to the **Google Spreadsheet → File →** click on **Import** & then a pop-up will appear.

Import File

- Click on the **Upload** button & then upload the CSV file.

Upload button

- Set the column name as table Column Key, and then **download** it as Comma-Separated-CSV and import it to the existing Ninja Tables.
