# Import Table from TablePress Plugin

Import / Export · https://ninjatables.com/docs/import-table-from-tablepress-plugin/

You can import tables from other WordPress plugins, besides importing tables from **CSV/JSON** files. And Ninja Tables can display data from TablePress if you import.

Find the "**Import From Other WP Table Plugin**" section under the **Import Table** option.

## Import TablePress Data into Ninja Tables

To import a table from the TablePress Plugin, you need the **TablePress** plugin pre-installed and a table ready to import.

Let's have a look at the article on how to accomplish that.

- First, create a table in TablePress and name it.
- Have a look at the screenshot below, which is a table made using **TablePress**.

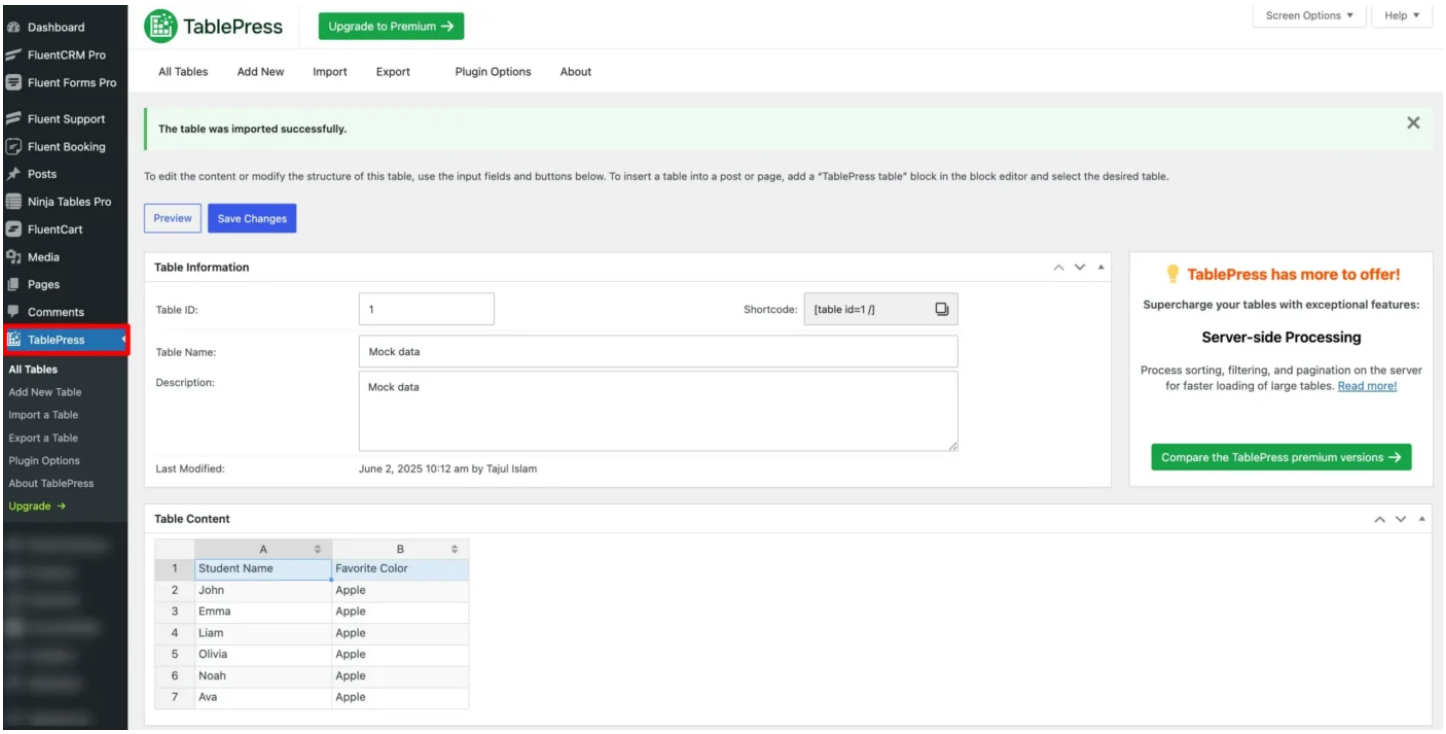

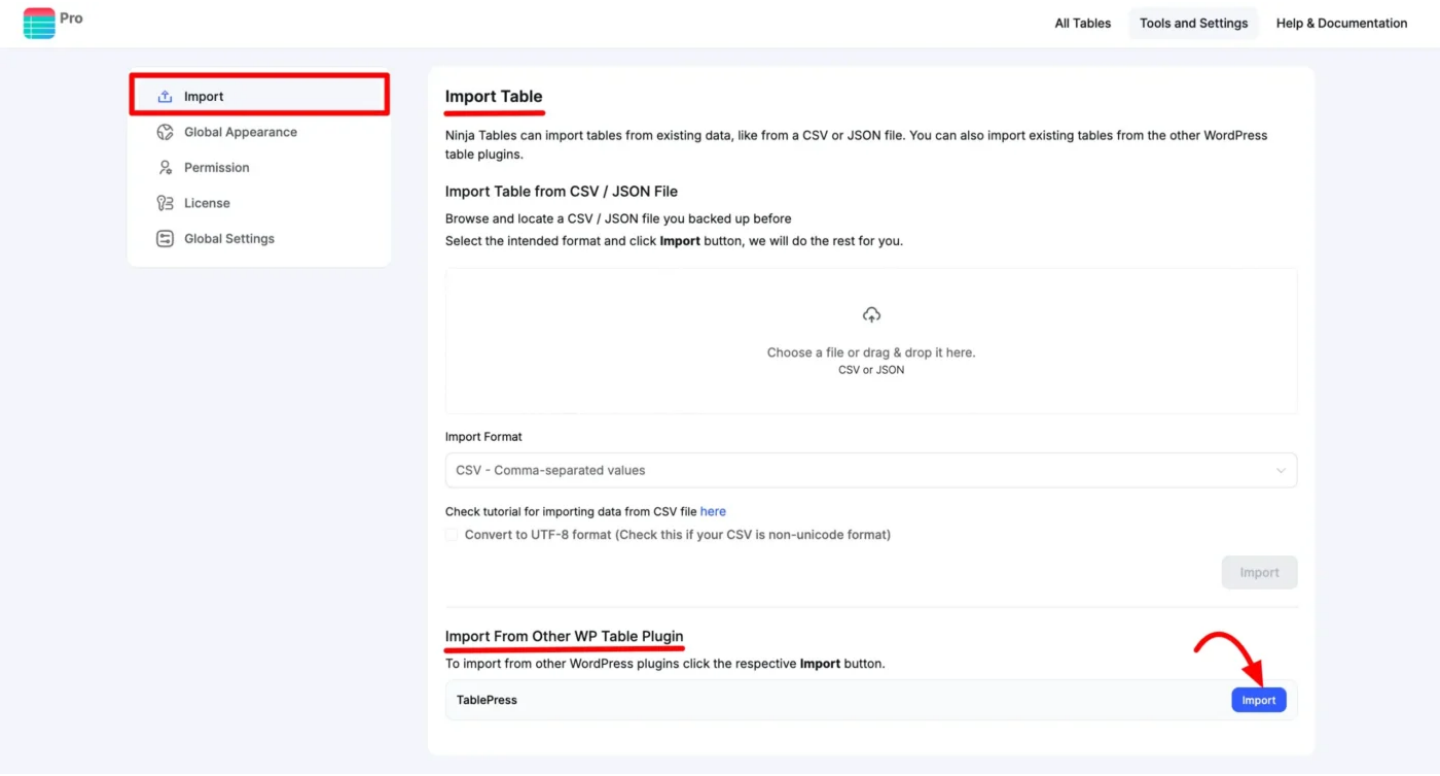

Table made of TablePress

- Now, go to the WordPress **Dashboard → Ninja Tables → Tools → Import** to import this table from the TablePress Plugin.

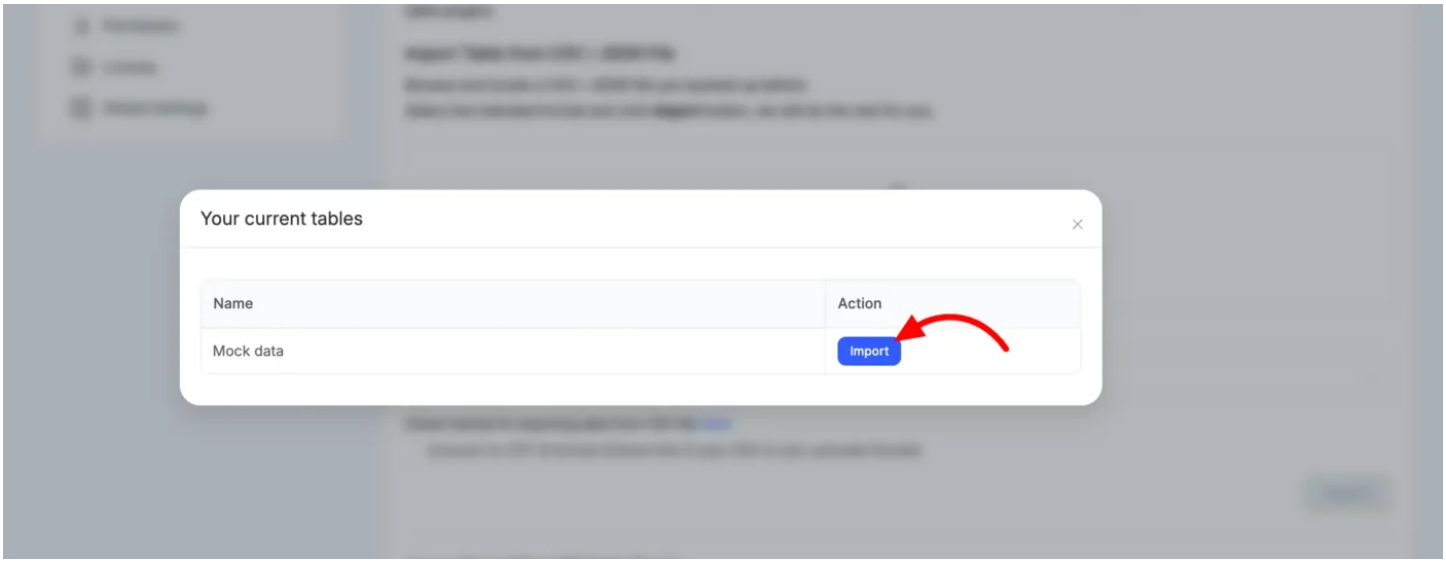

- Scroll down, and you will get the "**Import From Other WP Table Plugin**" option.

- Click on the **Import** button to import from TablePress.

- A popup will appear after that. Click on the Import button (right side of the table) & a button will appear beside the Import button, the **View Imported Table** button.

- By clicking on that button, you can view the imported table.

View Imported Table

- From the list of available Tables in TablePress, choose the table that you want to import into Ninja Tables.
