WooCommerce Product Average Rating Column

Miscellaneous · https://ninjatables.com/docs/woocommerce-product-average-rating-column/

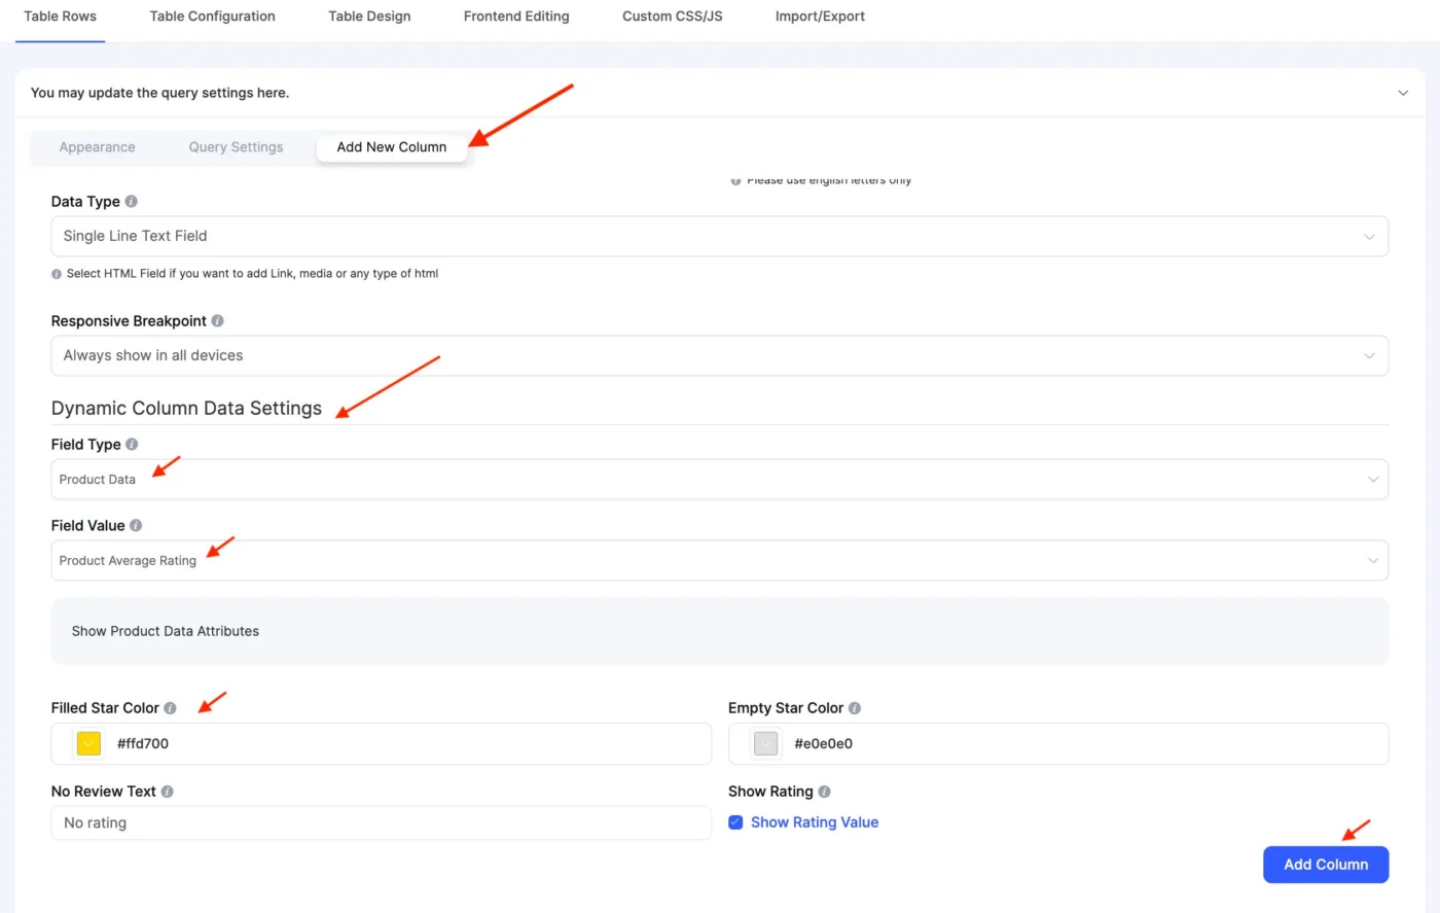

You can add extra columns to show more information, such as the product's overall average rating.

1. From the **Table Rows** section, click the **Add New Column** sub-tab.
2. Configure the basic settings, such as **Column Name** (e.g., "AVG. Rating") and **Data Type**.
3. Scroll down to the **Dynamic Column Data Settings** section. This powerful feature lets you pull specific data directly from your products.

Product Average Rating

You can now display the product's *overall average rating* in its own column. This allows customers to see both the individual review (e.g., 5 stars) and the product's average score (e.g., 4.5/5) at the same time.

Click **Add Column** to save the column. Your table will now show this data.

Accessing Standard Table Settings

The settings specific to your WooCommerce review data are located under the **Table Rows** tab. However, your table also has access to all the standard Ninja Tables settings, which you can see in the other tabs at the top of the editor:

- **Table Configuration:** Control core rendering settings, such as pagination, sorting, and search options.
- **Table Design:** Change your table's appearance, including colors, borders, and layout, to perfectly match your site's branding.
- **Frontend Editing:** Allow specified users to edit table data.
- **Custom CSS/JS:** For advanced users, this tab allows you to add your own custom CSS code or JavaScript.

- **Import/Export:** Manage your table's data by importing from or exporting to a CSV/JSON file.
